SAITACHAIN BURN TOKEN Whitepaper v.1.1

Overview

SaitaChain Burn Token has been designed with five principles.

1. To buy and burn SaitaChain Coin, Saitarealty Token & to help burn or fund other projects on the STC Blockchain.
2. To give transparency to investors.
3. To provide a safe trading asset.
4. Putting the STC & STCB community at the heart of everything we do.
5. A clear plan of future development of STCB Token.

This white paper will breakdown each of these principles and provide a summary of SaitaChain Burn Token or STCB for short.

The official contract address is:

0x90bD22BB5f71ba77342935086ddCadAF91968825 (fully renounced)

Disclaimer: We are not related at any level (Partnership or Business) to or with SaitaChain Coin or Saitama Technology – STCB is an independent SaitaChain Community Token. This statement may change in the future, if SaitaChain Coin or Saitama Technology are open to allowing STCB on their Swap Platform.

Supply of STCB

STCB has a maximum supply of 100,000,000 STCB tokens build into the contract, which cannot change/increase.

STCB cannot be minted.

STCB supply is deflationary with 0.5% of all Sells, Buys and Transfers being burnt to the dead wallet.

The following is the breakdown of the token distribution at launch.

STCB Token Distribution

■ Burned   ■ Pancake Swap Liquidity   ■ Held for Launch Promotions
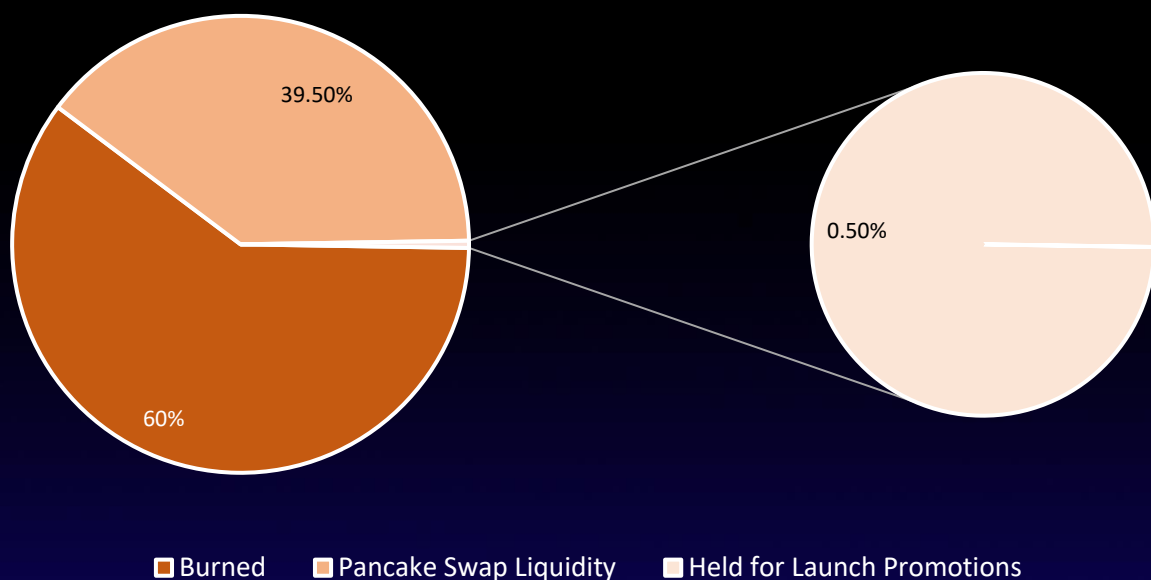

60% Burnt within the first week of launch.

39.5% Added to Pancake Swap liquidity, paired with BNB. LP tokens provided by Pancake Swap have been burnt.
(BNB Transaction - 0xe4fb0fd96ab97055860b695ece99d50e4c9f5705a11710313a81ad6251e7569c)

0.5% Held back for promotions and giveaway for launch week.

Taxes of STCB Token

STCB Token has built in taxes which are to provide revenue for the project's goals. The taxes are broken as follows.

- **SaitaChain Buy & Burn / Support Fund for any exclusive STC blockchain projects Tax 2% - Buys, Sells and Transfers.**

- **Marketing & Development Tax 1% - Buys, Sells and Transfers.**

- **STCB Automatic Burn 0.5% - Buys, Sells and Transfers.**

- **Holder Dividends 0.5% - Buys, Sells and Transfers.**

STCB Tax Overview

Holder Dividends 0.5%

Marketing & Development Tax 1%

STCB Automatic Burn 0.5%

SaitaChain Buy & Burn / Support Fund 2%

- Marketing & Development Tax 1%
- SaitaChain Buy & Burn / Support Fund 2%
- STCB Automatic Burn 0.5%
- Holder Dividends 0.5%
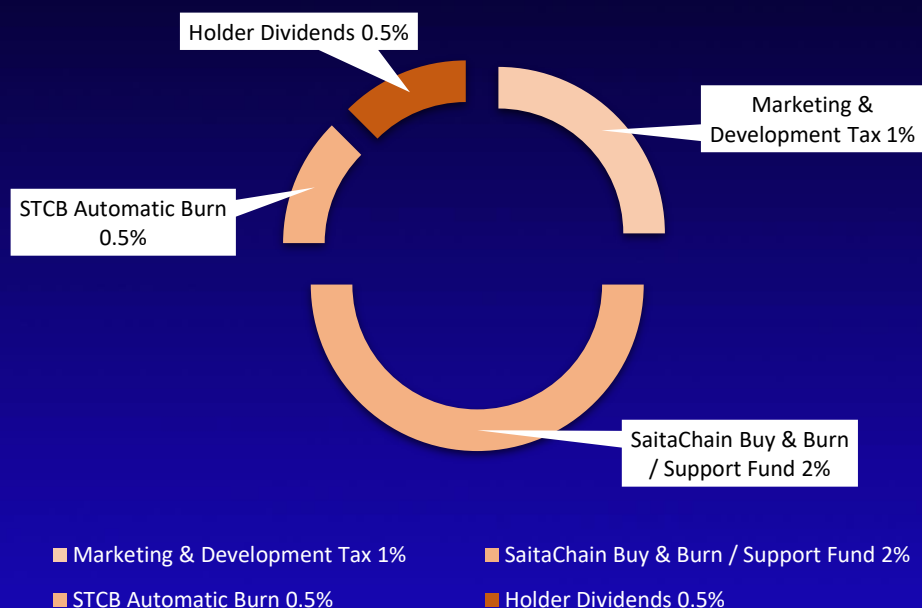

Holder Dividends – Quick How to Claim

STCB features a benefit to its holders of having the ability for them to claim Dividends of holding the token. There are two key rules.
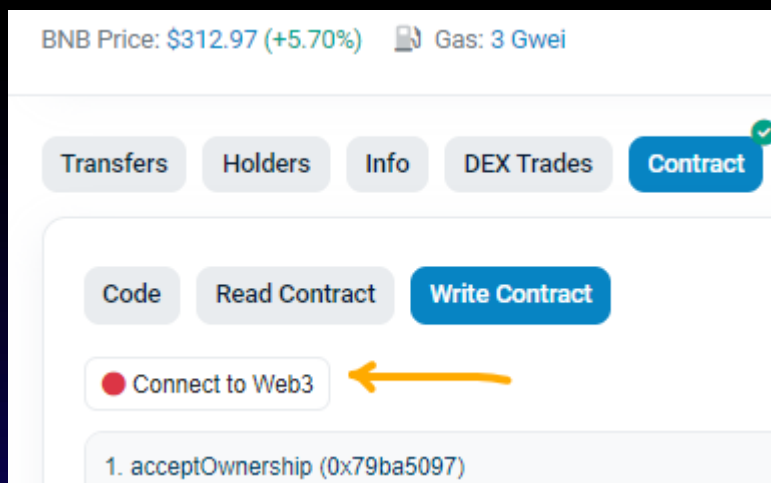

- Investors much hold at least 1 full STCB
- Auto claim in place and dividend rewards (in BNB) will be transferred to the holder's wallet every 24 hours.

Manual claim this can be done easily via the BSC Scan contract write function. We will update the website with a claim portal in the future (Summer 2024).
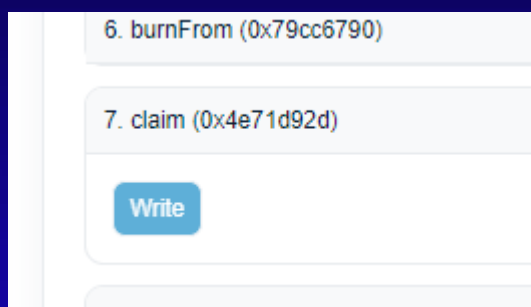

Claim via this link-
https://bscscan.com/token/0x90bd22bb5f71ba77342935086ddcadaf91968825#writeContract#F7

Step One; Connect wallet to the token contract.

Step Two; Click Write under the claim (7) function

Step Three; Confirm on your wallet interface (there will be a small BNB gas fee to pay); once your happy. The STCB tokens for your dividend rewards will be then transferred to your wallet.

Principle One - To buy and burn SaitaChain Coin, Saitarealty Token & to help burn or fund other projects on the STC Blockchain.

From December 2023, Saitama token changed to SaitaChain Coin. This was one of the most successful migrations in crypto history. One of the changes that had taken place was the removal of the automatic burn tax. The was a very good reason, that being SaitaChain will use SaitaChain Coin as gas fee, which is going to naturally reduce the STC supply. However, this is likely in very small amounts due to the cheap fees for the STC Blockchain. STCB Token will allow Sidechain Holders who still wish to help towards the burning of STC to do so; and at the same time invest in a second token. This burn is not exclusive to STC, but also open to Saitarealty token. Funds can also be used, under democratic voting of the community to also support or burn projects which are new to the STC blockchain.

Any buy and burns that take place when the funding is over $10.00 and using all the funds generated by the SaitaChain Coin Buy & Burn 2% Tax on Buys, Sells and Transfers. Subject to the community will of using the funding for other SaitaChain project support or buy and burns.

All transactions will be visible on the BNB blockchain using BSC Scan on wallet 0xD3ba60532dd03859208Ec276af6c4CD9e9fDE7F0

This wallet has also been clearly named as; stcbbuyandburn.bnb so it is easy to spot on BSC Scan.

The marking wallet has also been clearly named as saitachainburnmarketing.bnb with the address as; 0x8Dbc76d4ECe3B4d7E1a4BDFB71C22fC8323b96B3

Principle Two - To give transparency to investors.

To be open and honest is fundamental to gain investors trust and build on relationships. So, all use of STCB the token tax revenue from the Buys, Sells and transfers of STCB will be made public.

This will be in the form of:

- Blockchain transactions from BSC Scan.
- Receipts of products and service brough for the purpose of the token.
- Each time funds from the Marketing Wallet are used, this will be posted on our website in the Transparency Link. With evidence; receipts, blockchain transaction links, etc...
- Every year a full list review called token Tax Use (year) will be published.
- Regular updates to X (twitter), Discord and Website News to planned uses.
- Also there will be occasions where votes to the community on how funds are spent.

Principle Three - To provide a safe trading asset.

Safe trading is important in the crypto world.

The STCB contact has built in functions to help provide this.

- Antibot Cooldowns – these are Functions to limit trading to 30 second gaps. This helps to limit Bots 'Front Running' or 'sandwiching' our investors.

- Contract is fully renounced; meaning no one can ow change the tax percentage on trades and transfers. No wallet can be whitelisted or backlisted. Trading can not be stopped. Wallets can not be altered in relation to taxes being received too. In other words the contact cannot be changed.

- LP Tokens burnt. – Any LP token provided by a pool when liquidity in injected will be burnt. This has already taken place with the internal Pancake Swap pool. So, now all tokens and BNB in that pool can not be withdrawn by the development team. Any future exchanges or DeFi swaps, tokens will need to be bought by the development team to provide that liquidity on other exchanges DeFi swap platforms.

Principle Four - Putting the STC & STCB community at the heart of everything we do.

We will achieve this by the following.

- **Ensure we follow all the five principles.**
- **Take investor feedback to improve the token and its use case.**
- **Using voting methods before making important changes (via X).**
- **To hold regular Spaces (on X) or Discord Events.**
- **Engage with the STC community to try and make sure both cryptocurrencies have a future of growth and enrichment.**
- **Provide a roadmap of future development of STCB.**

Principle Five - 6 Month Roadmap (Dec 23 – May 24)

Phase 1 (Dec 2023 – Feb 2024)

- Pancake Swap Launch
- Website Set-up.
- Social Media Channels.
- Launch giveaway events.
- Contact verified & renounced.
- BSC Scan updated with price, supply, icon, socials, etc...

Phase 2 (March 2024)

- 2nd Launch on DeFi platform (TBC).
- Large STC Burn Event to celebrate the up-and-coming Blockchain.
- 1000 Holders.
- Publish any updates to white paper as v1.3

Phase 3 (April-May 2024)

- Launch on Saitaswap and STC Blockchain.
- 2000+ Holders.
- Phase 4 and 5 of the roadmap to cover June to December 2024 to be released.
